

Sorensen DCS Series

1–3 kW

General Purpose Systems Power Supply

8–600 V

- High power density / low ripple and noise
- High programming resolution with Ethernet interface
- Constant voltage and current mode
- Remote sensing
- Isolated analog control and monitoring (optional)

1.7–350 A

~	115	230
⏚	208	230

DCS Applications

The Sorensen DCS Series (hereafter DCS Series) is ideally suited for a wide range of applications requiring DC power in a small form factor. Applications range from manufacturing test and burn-in of automotive components, avionics electronics, telecommunications and consumer products to beam steering, process control and laboratory R&D use.

The DCS Series is comprised of 1kW, 1.2kW and 3kW programmable power supplies utilizing switchmode technology to achieve high power density in a low profile chassis. The design platform provides a highly reliable power supply for years of constant use. The unique design is available in a variety of maximum voltages from 8V to 600V and maximum currents from 1.7A to 350A with low ripple and noise.

This user-friendly platform can be controlled from the front panel with 10-turn potentiometers to adjust voltage, current and OVP settings. LEDs indicate over temperature, remote programming, shutdown and overvoltage protection

Remote control options allow full computer control through IEEE-488 (option M9C), LXI Standard Compliant* Ethernet LAN (option M130) or RS-232 (options M9C, M130)

Automotive Component Test

The 16-bit resolution of the Ethernet programming and hardware triggering allows for detailed sequencing associated with battery fluctuation simulation. The tight load regulation capability of the DCS series makes it a superior source for validation and acceptance testing and burn-in of automotive components. The 20V models, in particular, provide a full range of testing to simulate battery conditions. Margin testing of 12V and 14V nominal components, such as electronic control units (ECU) and electromechanical components, is easily achieved.

Rackmount ATE Systems

The high power density of the DCS series makes it ideal for ATE System integration. The wide variety of voltage and current combinations in 1U and 2U heights allows multiple voltage outputs in a small amount of space. The wide variety of control methods possible, allows easy integration into legacy systems as well as high speed systems.

Battery Charging

Battery charging requires high accuracy voltage and stable current output for fast bulk and absorption phase charging and high accuracy and stable voltage for float charging to avoid "gassing" the battery. The DCS series provides a high accuracy voltage output to optimize battery charging. With the remote interface options, the charging process can easily be automated for volume production.)

DCS Series : Product Specifications

Common	
Meter Accuracy	1% of full scale + 1 count
Max. Voltage Differential from Output to Safety Ground	150 VDC
Remote Start/Stop and Interlock	TTL compatible input or 12-250 VAC (12-130 VDC) or a contact closure
Cooling	Internal fan, over temperature shutdown if internal heat sink exceeds set temperature
Remote Sense	The maximum allowed sense line drop is 4V per line (2V on the DCS 8/10V 1 kW/1.2 kW models and 1V/line for all 3 kW models). Line drop subtracts from the maximum available output voltage at full rated power.
Remote Programming	Enabled via external jumper on rear panel connector J3
Overvoltage Protection	Crowbar type adjustable from 5-110% of rated output using front panel control (local or remote program selectable via J3 jumper)
Remote Analog Programming Linearity	±1%
Accuracy	±5%
Regulatory	Certified to UL/CSA 61010 and IEC/EN 61010-1 CE. Compliant (LVD and EMC directive)

Input	1 kW	1.2 kW	3 kW
Voltage Ranges	200-250 VAC / 100-132 VAC	200-250 VAC / 100-132 VAC	190-250 VAC / 200-250 VAC
Phases	Single Phase	Single Phase	Three Phase / Single Phase * (See Below)
Current	8A typical, 47-63 Hz 15A typical, 47-63 Hz	9A typical, 47-63 Hz 18A typical, 47-63 Hz	190-250 VAC, three phase, 14A, 47-63Hz. * (See Below) User configurable for: 200-250VAC, single-phase operation, 20A, 47- 63Hz. * See the modified operation curve below.

Output	
Stability	±0.05% of maximum voltage or current over 8 hours after 30 minute warm-up time at fixed line, load and temperature
Line Regulation	For input voltage variation over the AC input voltage range, with constant rated load.
Load Regulation	For 0-100% load variation, with constant nominal line voltage.
Voltage Resolution	0.02%
Transient Response	Typically recovers in 500 μs (1 & 1.2 kW) or 1ms (3k W) to 1% of steady-state output voltage (within 1% of Vmax) for 70-100% or 100-70% load change.

Model Number Description

Options and Accessories

M1	Factory configured for 115 VAC input (1 kW and 1.2 kW units only)
M9C	Internal IEEE-488/RS-232 Interface (can only support 12-bit slaves)
M13	Locking shafts (front panel potentiometers)
M32	Master/slave paralleling cable configured for two units
M33	Replace input connector with terminal block (3 kW only)
M51A	Isolated analog programming control of V/I/OVP and isolated V/I monitor outputs up to 500V relative to the supply's return line. This isolation allows users to control power supplies not connected to a common ground. In addition, in systems with high ambient noise or with large ground loop currents the control ground can be isolated from the power ground eliminating problems.
M85	12-bit slave interface option for use with M9 or M130 master (3 ft. control cable included)
M102	Front panel binding posts for 1 kW or 1.2 kW, Models $\leq 30A$, $\leq 100V$. Not compatible with M9C, M85, M130, M131, M133, M135, M136
M130	LXI™ compliant 10/100 Base T Ethernet remote control master interface; includes web server for direct control of power supply via web browser (MS Internet Explorer 6.0 or later)
M131	16-bit slave interface option for use with a M130 master (3 ft. control cable included)
M133	Output disconnect and polarity reversal relays controlled via SCPI commands. Limited to 1kW or 1.2 kW, $\leq 100V$, $\leq 60A$
M135	M130 & M133 combination. Limited to 1kW or 1.2 kW, $\leq 100V$, $\leq 60A$
M136	M131 & M133 combination. Limited to 1kW or 1.2 kW, $\leq 100V$, $\leq 60A$
105-300-26	Rack slide kit (3 kW only)
