Genera

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- · Specified environmental conditions met
- · Recommended calibration interval adhered to
- · All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $\langle , \leq , > , \geq , \pm \rangle$, or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP/3GPP2 standard, chip rates are specified in Mcps (million chips per second), whereas bit rates and symbol rates are specified in Mbps (million bits per second), kbps (thousand bits per second), Msps (million symbols per second) or ksps (thousand symbols per second), and sample rates are specified in Msample/s (million samples per second). Mcps, Mbps, Msps, ksps and Msample/s are not SI units.

Waveform measurements

Automatic measurements	measurements on channels, math waveforms, reference waveforms	burst width, count positive pulses, count negative pulses, count falling edges, count rising edges, mean value, RMS cycle, RMS, mean cycle, peak peak, peak+, peak-, frequency, period, amplitude, top level, base level, positive overshoot, negative overshoot, pulse width+, pulse width-, duty cycle+, duty cycle-, rise time, fall time, delay, phase, crest factor, slew rate+, slew rate-, σ.std. deviation, σ.std. deviation cycle
	reference levels	lower, middle and upper level in percentage
	statistics	maximum, minimum, mean, standard deviation and measurement count for each automatic measurement
	number of active measurements	8
Cursor measurements	type	vertical, horizontal, vertical and horizontal, V-marker
	functions	x and y tracking, coupling of cursors, set to trace, set to screen
Quick measurements	function	fast overview of measurements from one channel, some measurements displayed with result lines in diagram
	sources

	measurements displayed in diagram	mean, max. peak, min. peak, rise time, fall time
	numerically displayed measurements	RMS cycle, peak-to-peak voltage, period, frequency

Digital voltmeter

Accuracy		related to channel settings of voltmeter
		source
Measurements		DC, AC+DC RMS, AC RMS
Sources	R&S®RTA4004	channel 1, channel 2, channel 3,
		channel 4
Number of measurements		up to 4
Resolution		up to 3 digits
Bandwidth		1 MHz

Counter

Measurements		frequency, period
Sources	R&S®RTA4004	channel 1, channel 2, channel 3,
		channel 4, trigger signal source
Number of measurements		2
Resolution		7 digits
Frequency range		0.05 Hz to bandwidth of oscilloscope
		(limited by bandwidth of trigger filter)

Mask testing

Sources	R&S [®] RTA4004	channel 1, channel 2, channel 3, channel 4
Mask definition		acquired waveform with user-defined tolerance, can be stored and restored
Result statistics		completed acquisitions, passed and failed acquisitions (absolute and in percent), test duration
Actions on mask violation		sound, acquisition stop, screenshot, save waveform, pulse out (AUX OUT connector)
Captured segments		all segments, failed segments

Waveform maths

Number of math equations		up to 5
Functions		addition, subtraction, multiplication,
		division, square, square root, absolute
		value, reciprocal, inverse, log10, ln,
		derivation, integration, low pass, high pass
	R&S®RTA4004	channel 1, channel 2, channel 3,
		channel 4, math waveforms 1 to 4

Fast Fourier transformation (FFT)

Sources	R&S®RTA4004	channel 1, channel 2, channel 3, channel 4, math waveforms, references
Setup parameters		start frequency, stop frequency, center
		frequency, frequency span, vertical scale,
		vertical position, resolution bandwidth,
		gate (time range and position)
Windows		Hanning, Hamming, Blackman,
		rectangular, flat top
Waveform arithmetic		none, min. hold, max. hold, average
		(selectable 2 to 1024)
Scaling		dBm, dBV, dBμV, V (RMS)

Search function

Functions	search types	edge, width, peak, rise/fall time, runt, data2clock, pattern, window, protocol (available with R&S®RTA-K3, R&S®RTA-K6 and R&S®RTA-K7 options)
	configuration	manual level setting on screen, level with selectable hysteresis
	display of search events	up to 10 000 events in diagram and in result table
	markers on search events	up to 32 markers
	navigation in search events (stop mode)	knob (if result table is active)
Sources	R&S®RTA4004	channel 1, channel 2, channel 3,
		channel 4, math waveforms from 1 to 5, D15 to D0 (with R&S®RTA-B1 option)

Display characteristics

Diagram types	manually changeable vertical window size	Yt, XY, zoom, FFT, spectrogram (with R&S®RTA-K18 option)
XY mode		parallel display of XY diagram and Yt diagrams of input signals for X, Y
Zoom		horizontal and vertical zoom, split screen with overview signal and zoomed signal
Interpolation		sin(x)/x, linear, sample & hold
FFT mode		split screen with Yt diagrams and dedicated frequency diagram, spectrogram (with R&S®RTA-K18 option)
Waveform display		lines, dots only
Persistence		50 ms to 12.8 s; infinite
Special display mode		inverse brightness, waveform color modes for analog channels (temperature, fire, rainbow)
Diagram grid		lines, reticle, none, with annotation, track grid
Reference signals		up to 4 reference signals

Protocol and logic

Bus decode	number of bus signals	4 1
	bus types	parallel, parallel clocked
	R&S®RTA-K1 option	SSPI, SPI, I ² C
	R&S®RTA-K2 option	UART/RS-232/RS-422/RS-485
	R&S®RTA-K3 option	CAN, LIN
	R&S®RTA-K5 option	I ² S, LJ, RJ, TDM
	R&S®RTA-K6 option	MIL-STD-1553
	R&S®RTA-K7 option	ARINC 429
	display types	decoded bus, logical signal,
		frame table (depends on decoded bus)
	position and size	size and position on screen selectable
	data format of decoded bus	hex, decimal, binary, octal, ASCII

Power analysis			
General description	The R&S®RTA-K31 power analysis option extends the R&S®RTA firmware we measurement functionality focused on switched mode power supplies (SMPS DC/DC converters.		
Input	quality	evaluation of power quality at an AC input; measures real power, apparent power, reactive power, power factor and phase angle of power, frequency, crest factor, RMS of voltage and current	
	harmonics	measures up to the 334th harmonic of the incoming line frequency; precompliance checking for IEC 61000-3-2 (A, B, C, D), RTCA DO-160, MIL-STD-1399, max. limit checks	
	inrush current	measures peak inrush current and electrical charge within up to 3 configurable measurement zones to analyze the inrush and post-inrush behavior	
	consumption	long term measurement of consumed power and energy to analyze nonperiodical signals of e.g. standby devices	
Switching/control loop	slew rate	The minimum and maximum slew rate of current or voltage is measured at start and end of the switching cycle.	
	modulation	measures modulation of switching frequency, duty cycle (±) and pulse width	
D	dynamic on-resistance	measures resistance of the switching transistor(s) in active state	
Power path	efficiency	measures input and output power to calculate the efficiency of a power device	
	switching loss	measures switching loss and conduction loss of a power device	
	safe operating area (SOA)	checks violation of voltage and current limits in which a power device can operate without damage; current versus voltage view (linear or log); violation mask is user- defined and editable in linear and log-log	
		views; save/load of masks; export of mask violation data	
	turn on/off time	measures relationship between AC and DC current, when turning SMPS off and on	
Output	ripple	measures AC components of output voltage or current, AC RMS, mean, period, frequency, duty cycles, min./max./peak-to-peak amplitude	
	spectrum	FFT analysis of output, measurement of frequency peaks	
	transient response	This measurement captures the device behavior between the event of load changes and stabilization; includes peak (voltage, time), settling time, rise time, overshoot and delay	
Deskew	automated	By using the R&S®RT-ZF20 probe deskew and calibration test fixture and Rohde & Schwarz voltage and current probes, the skew between the signals is compensated automatically.	
Zero offset	automated	automatic compensation of input offset	
Reporting	Report data can be saved for every measurement. Report generation using user-selected test results from historical and current tests. Put repeated and/or different measurements in one report. R&S®Oscilloscope Report Creator can be downloaded from Rohde & Schwarz website free-of-charge.

Extended warranty with a term of one and two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge ⁶. Necessary calibration and adjustments carried out during repairs are also covered.

Extended warranty with calibration (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs ⁶ and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

Extended warranty with accredited calibration (AW1 and AW2)

Enhance your extended warranty by adding accredited calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated under accreditation, inspected and maintained during the term of the contract. It includes all repairs ⁶ and accredited calibration at the recommended intervals as well as any accredited calibration carried out during repairs or option upgrades.

⁵ For options that are installed, the remaining base unit warranty applies if longer than 1 year. Exception: all batteries have a 1 year warranty.

⁶ Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.
