# Die 56xxi Series:

The semi-automatic Gold Ball-Bonder 5610i fills the gap between the manual and semiautomatic Ball Bonder.

The 5610i is fully PC controlled and allows any number of bonds and bumps to be programmed. Pre-programmed adjust points are targeted through the camera's cross hair targeting system and the programmed bonds or bumps are executed automatically.

Two operating modes are available: Single bond for repair of various bond samples and making single bonds (manualautomatic) and multi wire for teaching and bond-ing chips or various bond samples (semi and fully automatic).

The 5610i can also be used as Thin Wire Wedge Wedge or Heavy Wire as well as pull-/shear tester by simply replacing the bond head and loading the appropriate software.

Set-up time: ~ 3 minutes. Ask us for more information!
